Outdoorsville Governor Announces Next Generation Vaccine Data Access
Outdoorsville residents will now be able to access their COVID-19 vaccine credentials through state-issued IDs, smartphone apps, and a website

Capital City, Outdoorsville, May 18, 2021 — Today, the Governor announced a new initiative by the Outdoorsville Digital Service to allow residents to more easily show their proof of vaccination to any entities that may require it. This initiative is part of Outdoorsville's ongoing efforts to make access to information and services easier for all residents. This initiative will also allow private businesses, restaurants, schools, and other locations to open up more quickly and more safely.

"Now that every adult in Outdoorsville who wants a COVID-19 vaccine can get one, we look to the future of how immunization records are used to allow access to venues and services across the state. For too long, large and powerful interests have acted as gatekeepers that decide who benefits from new apps and services and who will have access to the information that powers them. Today, Outdoorsville launches a technology platform to level the playing field. Through this new program, OVnnectID, we empower citizens to control their own vaccine records at low cost. The platform will allow residents to show their vaccine credentials to any entities that require it in a secure and privacy-preserving manner," said the Governor.

Outdoorsville Digital Service is the state information technology agency responsible for piloting new solutions at the state. Currently, most residents are only able to show their proof of vaccination by showing a physical ID card provided by the Centers for Disease Control and Prevention. Under OVnnectID, residents can show their vaccination status electronically to any entity that may require it, such as restaurants, bars, sporting arenas, and schools. Residents can show their vaccination status through the myOutdoorsville app, by scanning their driver's license or state-issued ID, or by logging into a website run by Outdoorsville.

"OVnnectID incorporates modern technology principles for direct, secure vaccine record status access, linked to your MyOutdoorsville digital driver's license or traditional drivers license," said the director of the Outdoorsville Digital Service. "This new program will improve access to immunization data for people in our state."
